Eval. Notes:	On August 23rd and 25th 2017, I (Rebecca Meissner) conducted an investigation at Gulf Oil LP, which is located at 920 Kings Highway in Thorofare, NJ. Gulf Oil has been issued EPA Identification #: NJD991291600 at this location. This investigation was prompted by the submittal of a Self-Disclosure Report from Gulf Oil to the Department dated 8/14/17. This letter referenced "Non-Compliance with 40 CFR 262.11." This investigation was conducted concurrently with a standard compliance inspection at the facility; refer to SC1170001-NJD991291600 in NJEMS for further details. According to the Self-Disclosure Statement: In mid-February 2017, Gulf Oil generated thirty-six 55-gallon drums of petroleum tank bottoms during the clean-out of an aboveground storage tank (AST) at the Woodbury Terminal. On 3/16/17, the drums were transported to Clean Earth of New Jersey (South Kearny, NJ) by Auchter Industrial Vac Service (Linden, NJ) as non-hazardous waste under a bill-of-lading. A non-hazardous waste determination for all thirty-six drums was made by Gulf Oil based on the test results of a sample which had been collected from one of the drums (flash point > 145 degrees Fahrenheit); however, testing conducted at Clean Earth on 4/3/17 determined that thirty-one of the thirty-six drums contained hazardous waste (flash point = 120 degrees Fahrenheit). These drums were subsequently manifested (under hazardous waste manifest #: 017578676JJK) and transported to Ross Incineration Services (Grafton, OH) as "Waste Solids Containing Flammable Liquid" (hazardous waste codes-D001, D006, D007, D016, D039 and D040) on 6/15/17. The hazardous waste manifest references fifty-seven drums on line 1; thirty-one of these drums are believed to have been the waste received from Gulf Oil. The hazardous waste manifest listed Clean Earth of New Jersey (EPA ID #: NJD991291105) as the generator of the waste. According to E. Chaguay, Gulf Oil waited until 8/14/17 (133 days after the discover											

No Linked Violations

Note: Penalty information associated with an enforcement action is reported with the enforcement action. For enforcement actions associated with multiple violations, the penalty information will be reported with each violation, however, the penalty is only assessed once, regardless of the number of violations associated with the enforcement.

Eval. Notes: On August 23rd and 25th 2017, I (Rebecca Meissner) conducted a standard compliance inspection at Gulf Oil LP, which is located at 920 Kings Highway in Thorofare, NJ. This inspection was conducted concurrently with an investigation at the site; refer to INV170001-NJD991291600 for further details. The facility has been issued EPA Identification #: NJD991291600 at this location. Gulf Oil is a distribution terminal for gasoline and ultra-low sulfur diesel (ULSD) which is owned by Arc Light Logistics. Products are received from the Monroe Refinery (located adjacent to this facility) and from Philadelphia Energy Solutions. There are a total of fourteen (14) aboveground storage tanks (numbered 101-115) which are located within a diked containment field. These tanks contain gasoline/diesel products and additives such as red or blue dyes. At the time of the inspection, tanks 103 and 114 were empty. The facility also operates a vapor recovery unit, two septic systems, a stormwater run-off treatment system consisting of an oil/water separator, a subsurface remediation system installed and operated by the former owner (Chevron USA), and two aboveground heating oil tanks which are used to heat buildings on-site. A small fenced area within the terminal property is operated by Williams Transco Pipeline (natural gas). Previously, the only hazardous waste stream at this facility was gasoline-contaminated absorbents used to clean up gasoline spills which occur at the rack. According to Enrique Chaguay (Terminal Manager), all gasoline spills are managed by Miller Environmental Group (Paulsboro, NJ); however, there have been no gasoline spills in approximately 3-4 years. The facility also generates some non-hazardous oil-contaminated waste. Located on the drum pad was one 55-gallon drum of oil-contaminated absorbents, one 55-gallon drum of oil-contaminated absorbents and broken glass from empty sample bottles, and one 55-gallon drum of oily water. Oil-contaminated abs
